Info Kit Adenium No. 01 April 2006 Vol. 03

Adenium. A multicharm plant is the proper term for adenium. The superiority of kamboja jepang-its typical name in Indonesia-lies in the beauty of the flowers pattern and colour; the plant crown was formed from the branching; the variety of leaves; and the stem character. The figure is even more perfect if it is supported by a distinctive caudex and not to mention 'the serving' of 200-300 variants of various shape that endulge the fans. All of those things make adenium even more popular. Read about the detail information of the variety of variants and characters; the business analysis of the preparation of opening a plantation; stages of planting and treating; the disease controlling; and also harvest and packaging. Read also a variety ways of propagation, crossing, and the techniques to beautify the caudex, stem, branch, and also flowers. Find also the adresses of nurseries, marketer, and the infrastructure for agricultural production shop.
