This is it! The extremely rare adenium flowers, a white petal flower with red bottom funnel and yellow upper funnel.

Such pattern is rarely found on a white petal flower. There is also obesum hybrid with variegated leaves which is predominantly milky white and grey and is considerably contrast with the red flower. The most brand new one is an adenium with splash pattern and tricolour combination. All of them are accompanied with yellow adenium, double crown adenium, green adenium and black adenium. Those are the latest generation of adenium flowers that Trubus compiled from the coverage to Thailand, Taiwan, Malaysia, and Indonesia since a year ago.
